ABSTRACT: We The leiuperid genus *Physalaemus* is widespread in South America. The Maracas dwarf frog *Physalaemus cicada* occurs in southeastern and northeastern Brazil, mainly in Caatinga biome. Herein, we updated the distribution of *P. cicada*, presenting new data on distribution on Ceará, Pernambuco, Piauí and Rio Grande do Norte states, Brazil.

The Neotropical leiuperid genus *Physalaemus* Fitzinger, 1896 comprises 45 described species (Frost 2011), widely distributed in South America, east to Andes (Nascimento *et al.* 2005). The Maracas dwarf frog *Physalaemus cicada* Bokermann, 1966 (Figure 1), is distributed mainly at northeastern Brazil, with records also at southeastern Brazil in state of Minas Gerais (Nascimento *et al.* 2005; Silveira 2006; Linares and Mello 2011; Frost 2011). It can be found in the Caatinga Biome in the states of Alagoas (Lisboa e Haddad 2009), Ceará (Nascimento *et al.* 2005; Loebmann and Mai 2008), Bahia (Bokermann 1966; Nascimento *et al.* 2005; Santana and Juncá 2007), Paraíba (Vieira *et al.* 2007), Pernambuco (Borges-Nojosa and Santos 2005), Rio Grande do Norte (Jorge and Freire 2012) and Sergipe (Caldas *et al.* 2010), also occurring at localities in transition zones between the Cerrado and Caatinga Biomes in Minas Gerais (Nascimento *et al.* 2005; Linares and Mello 2011) and Piauí states (Benício *et al.* 2012).

Herein, we updated the distribution of *Physalaemus cicada* at northeastern Brazil, extending the known distribution of the species in Ceará, Pernambuco, Piauí and Rio Grande do Norte states, providing a new geographic distribution map for the species (Figure 2, Table 1). Specimens were collected by hand or pitfall-traps with drift-fences during herpetological surveys at several localities from December 2009 to February 2012. Voucher specimens were deposited at “Coleção Zoológica de Vertebrados da Universidade Federal de Mato Grosso” (UFMT-A, Cuiabá, Mato Grosso, Brazil): PIAUÍ - Brejo do Piauí municipality ($8^{\circ}13'36"S, 42^{\circ}49'51"W$; UFMT-A 11165; 11241, 11215); and at the “Coleção Herpetológica da Universidade Regional do Cariri” (URCA-H, Crato, Ceará, Brazil): CEARÁ: municipality of Barro ($07^{\circ}05'29.1"S, 38^{\circ}43'31.3"W$; URCA-H 686-687), Várzea Alegre ($06^{\circ}52'20.5"S, 039^{\circ}13'03.8"W$; URCA-H 3001-3002), and Acopiara ($06^{\circ}12'22.8"S$,

$039^{\circ}30'14.6"W$; URCA-H 3181-3183), municipality of Farias Brito ($06^{\circ}78'32"S, 39^{\circ}53'31"W$; URCA-H 5187, 5201-5205), municipality of Missão Velha ($07^{\circ}15'58.2"S, 39^{\circ}04'55.8"W$; URCA-H 5456), municipality of Aiuba ($06^{\circ}39'41.7"S, 40^{\circ}06'23.3"W$; URCA-H 5319-5324); PERNAMBUCO: municipality of Ouricuri ($08^{\circ}07'55.7"S, 040^{\circ}0503.2"W$; URCA-H 1069,1071); RIO GRANDE DO NORTE: municipality of João Câmara ($05^{\circ}33'S, 35^{\circ}56'W$; URCA-H 2927-2935). Individuals were also recorded calling at Reserva Natural Serra das Almas, municipality of Crateús ($5^{\circ}16'04"S, 40^{\circ}54'13"W$), state of Ceará, municipality of Parnamirim ($04^{\circ}36'78.1"S, 91^{\circ}06'41"W$), state of Pernambuco and at municipality of Guamaré ($05^{\circ}13'8.45"S, 34^{\circ}41'6.81"W$), state of Rio Grande do Norte.

This is the second records of *P. cicada* at Rio Grande do Norte state, extending the known distribution at 140 Km west from the municipality of Santa Maria, state of Rio Grande do Norte ($05^{\circ}50'01.78"S, 35^{\circ}44'20.37"W$) (Jorge and Freire 2012). The municipality of Brejo do Piauí is

FIGURE 1. An adult male of *Physalaemus cicada* collected buried, from Ouricuri municipality, Pernambuco, Brazil. Photo: R.W. Ávila.

the second locality record of *P. cicada* in the state of Piauí, extending the distribution at about 287 Km south-west from municipality of Picos ($07^{\circ}5'15.88''S$, $41^{\circ}24'1.67''W$) (Benício et al. 2012). Moreover, the new records reported

here fills gaps of distribution of *P. cicada* at Ceará and Pernambuco states and are important contributions to the knowledge of distribution of *Physalaemus cicada* at northeastern Brazil.

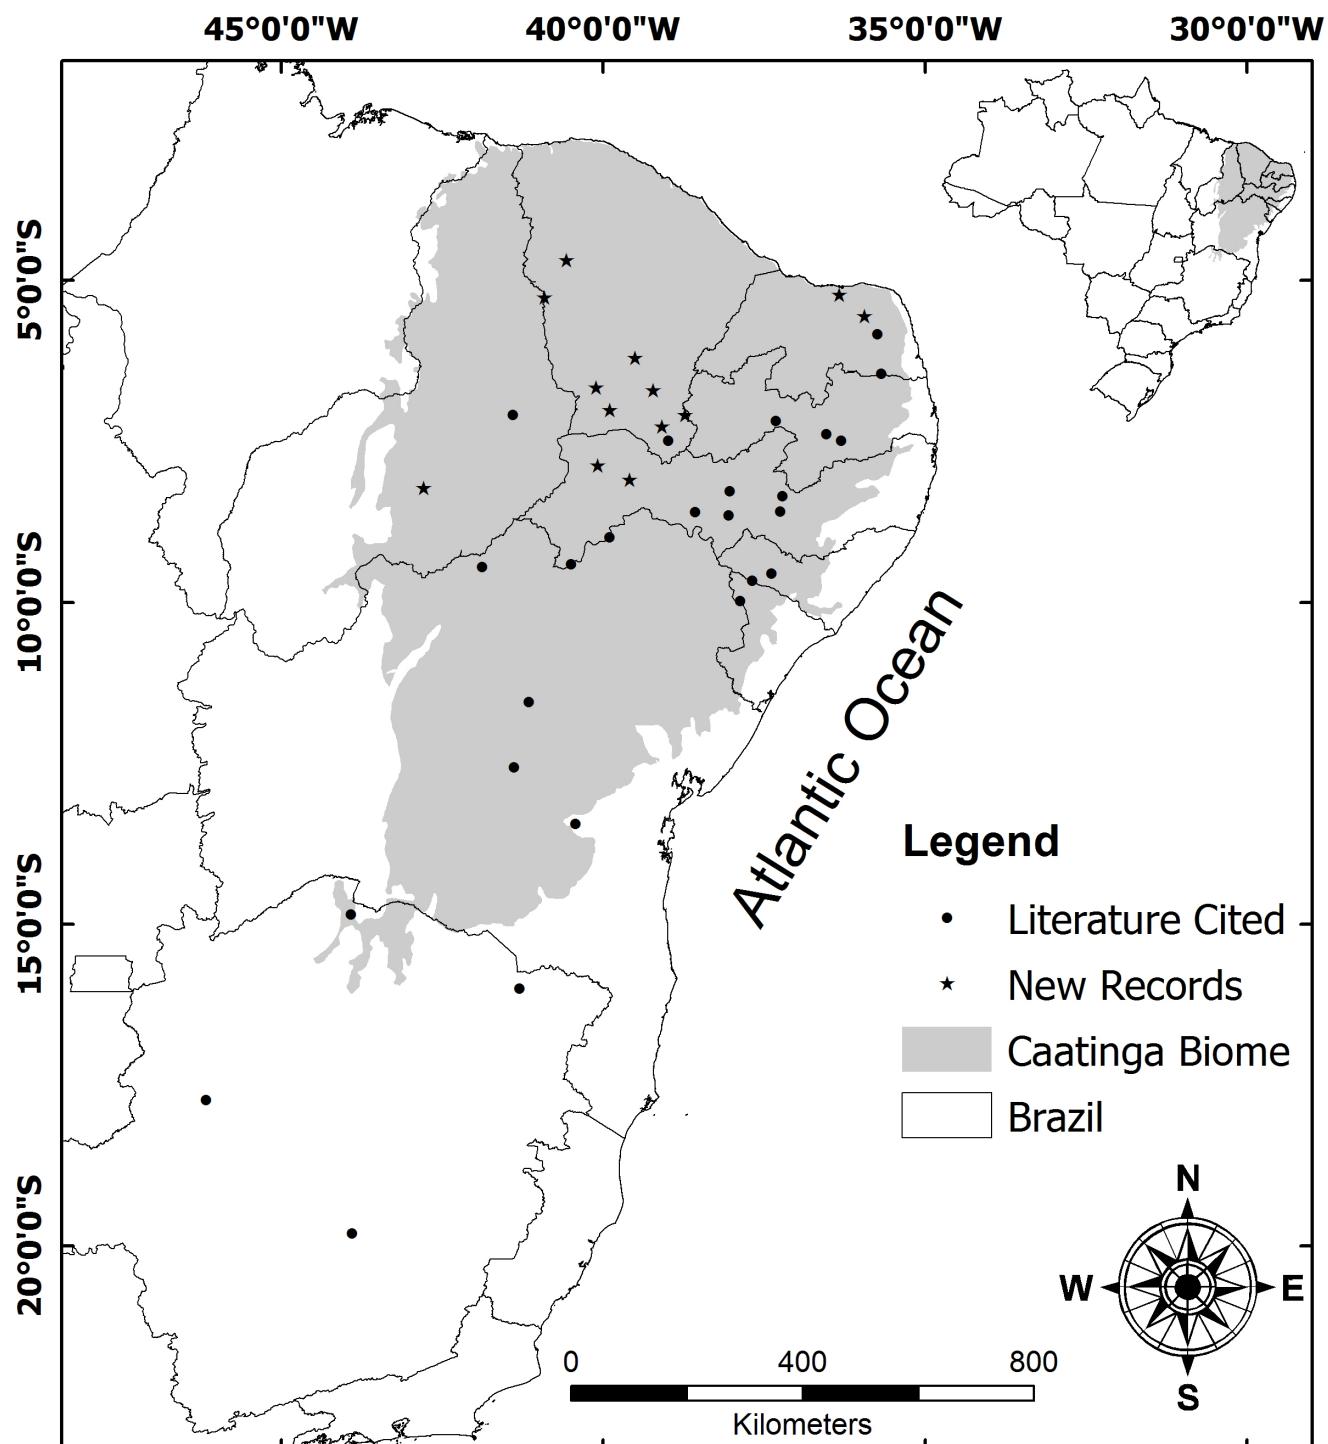

FIGURE 2. Known distribution of *Physalaemus cicada* in the Brazilian states. States abbreviations: MG = Minas Gerais; BA = Bahia; SE = Sergipe; AL = Alagoas; PE = Pernambuco; PB = Paraíba; CE = Ceará; PI = Piauí; RN = Rio Grande do Norte. Star = New Record (see Table 1); Black Circles = Literature data.

TABLE 1. Localities of known distribution of *Physalaemus cicada*.

STATE	MUNICIPALITY	LATITUDE (S)	LONGITUDE (W)	REFERENCE
Alagoas	São José do Tapera	09°33'28"	37°22'51"	Lisboa and Haddad (2009)
Bahia	Maracás	13°26'28"	40°25'51"	Bokermann (1966)
Bahia	Juazeiro	09°24'42"	40°29'55"	Nascimento et al. (2005)
